

Lab 1: Basic Form Creation

The screenshot shows a web browser on the left and a code editor on the right. The browser displays a form with a text input labeled "Name:" and a "Submit" button. Below the form, the text "Hello, Jaylyn Sanchez" is displayed. The code editor shows the PHP code for Lab1.php, which uses the GET method to retrieve the name and echo a greeting.

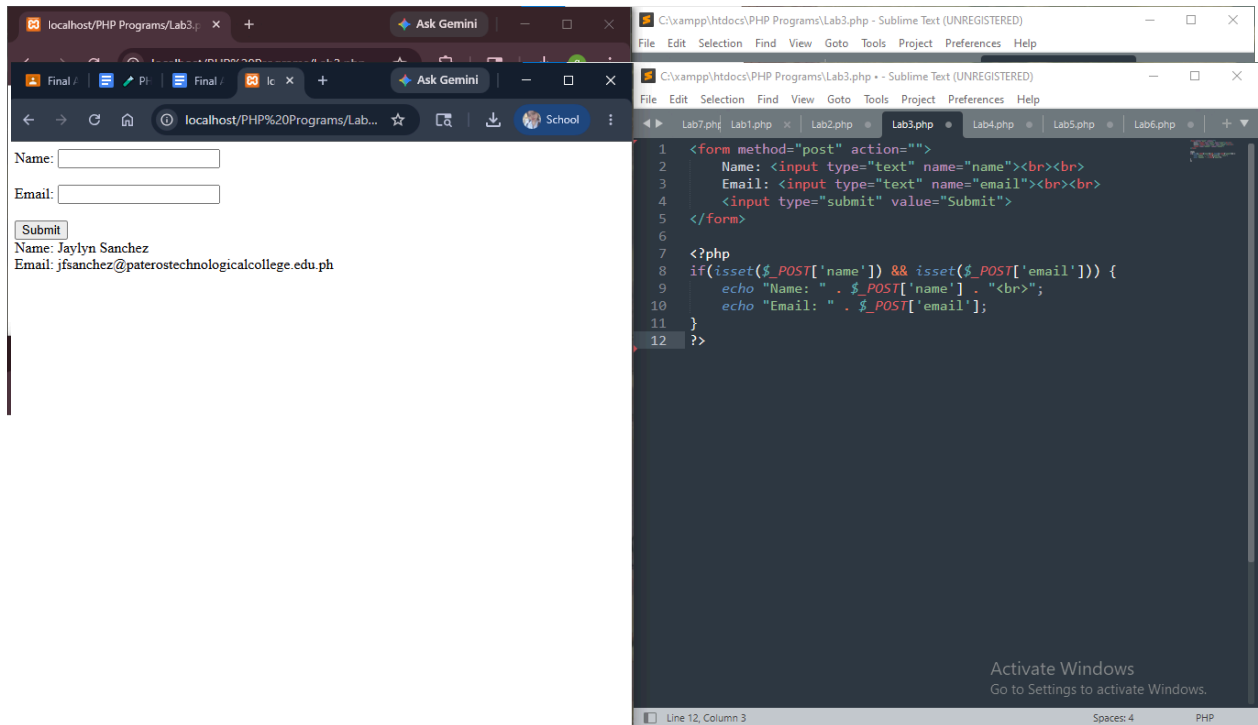

```
1 <form method="get" action="">
2   Name: <input type="text" name="name">
3   <input type="submit" value="Submit">
4 </form>
5
6 <?php
7 if(isset($_GET['name'])) {
8     echo "Hello, " . $_GET['name'];
9 }
10 ?>
11
```

Lab 2: Using POST Method

The screenshot shows a web browser on the left and a code editor on the right. The browser displays a form with a text input labeled "Name:" and a "Submit" button. Below the form, the text "Hello, Jaylyn Sanchez" is displayed. The code editor shows the PHP code for Lab2.php, which uses the POST method to retrieve the name and echo a greeting.

```
1 <form method="post" action="">
2   Name: <input type="text" name="name">
3   <input type="submit" value="Submit">
4 </form>
5
6 <?php
7 if(isset($_POST['name'])) {
8     echo "Hello, " . $_POST['name'];
9 }
10 ?>
11
```

Lab 3: Multiple Input

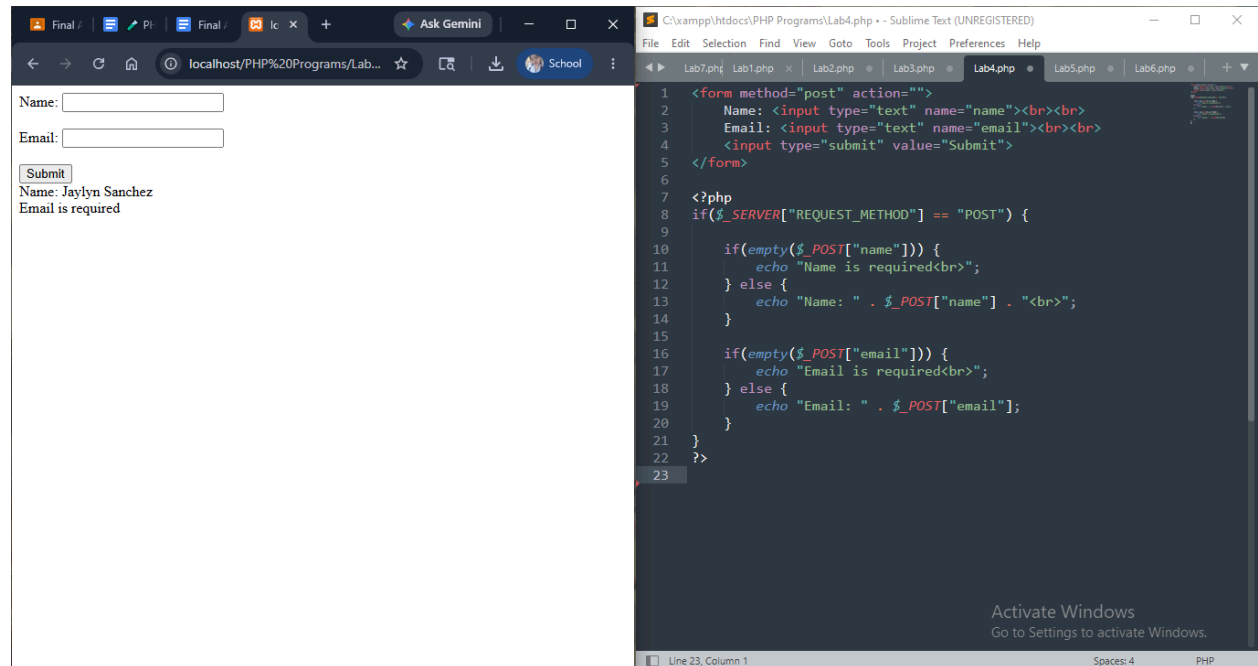

The browser window displays a form with two text input fields labeled "Name:" and "Email:", and a "Submit" button. Below the form, the output shows the submitted values: "Name: Jaylyn Sanchez" and "Email: jfsanchez@paterostechnologicalcollege.edu.ph".

The Sublime Text editor shows the PHP code for Lab3.php:

```
1 <form method="post" action="">
2   Name: <input type="text" name="name"><br><br>
3   Email: <input type="text" name="email"><br><br>
4   <input type="submit" value="Submit">
5 </form>
6
7 <?php
8 if(isset($_POST['name']) && isset($_POST['email'])) {
9   echo "Name: " . $_POST['name'] . "<br>";
10  echo "Email: " . $_POST['email'];
11 }
12 ?>
```

Lab 4: Form Validation (Required Fields)

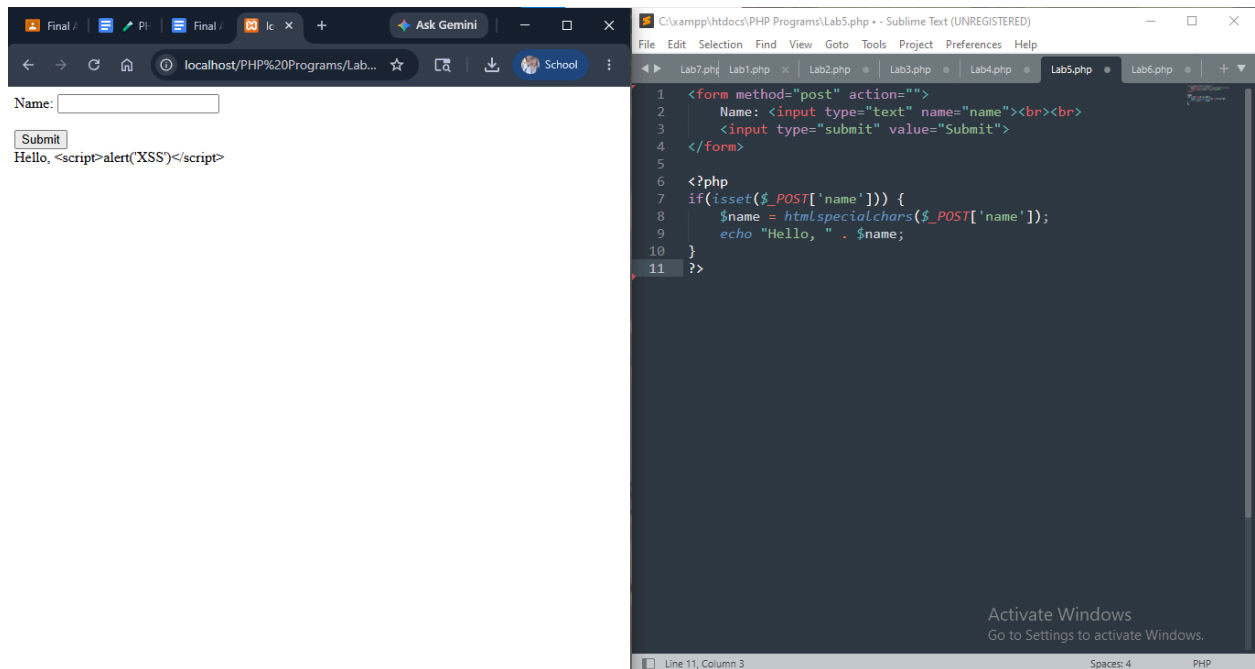

The browser window displays the same form as in Lab 3. However, the output shows an error message: "Email is required".

The Sublime Text editor shows the PHP code for Lab4.php:

```
1 <form method="post" action="">
2   Name: <input type="text" name="name"><br><br>
3   Email: <input type="text" name="email"><br><br>
4   <input type="submit" value="Submit">
5 </form>
6
7 <?php
8 if($_SERVER["REQUEST_METHOD"] == "POST") {
9
10   if(empty($_POST["name"])) {
11     echo "Name is required<br>";
12   } else {
13     echo "Name: " . $_POST["name"] . "<br>";
14   }
15
16   if(empty($_POST["email"])) {
17     echo "Email is required<br>";
18   } else {
19     echo "Email: " . $_POST["email"];
20   }
21 }
22 ?>
23
```

Lab 5: Prevent XSS

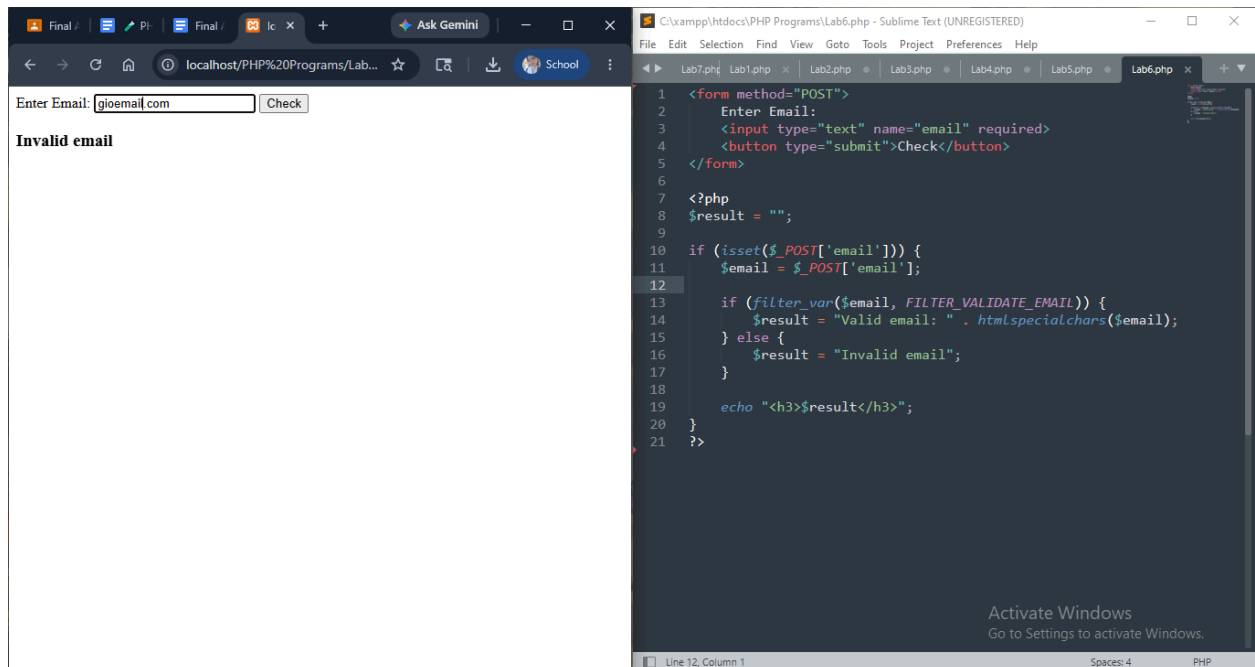

The browser window shows a web application running on localhost. It has a form with a label "Name:" and a text input field. Below the input field is a "Submit" button. After clicking the button, the page displays "Hello, <script>alert('XSS')</script>".

The Sublime Text editor shows the code for Lab5.php:

```
1 <form method="post" action="">
2     Name: <input type="text" name="name"><br><br>
3     <input type="submit" value="Submit">
4 </form>
5
6 <?php
7 if(isset($_POST['name'])) {
8     $name = htmlspecialchars($_POST['name']);
9     echo "Hello, " . $name;
10 }
11 ?>
```

Lab 6: Email Validation

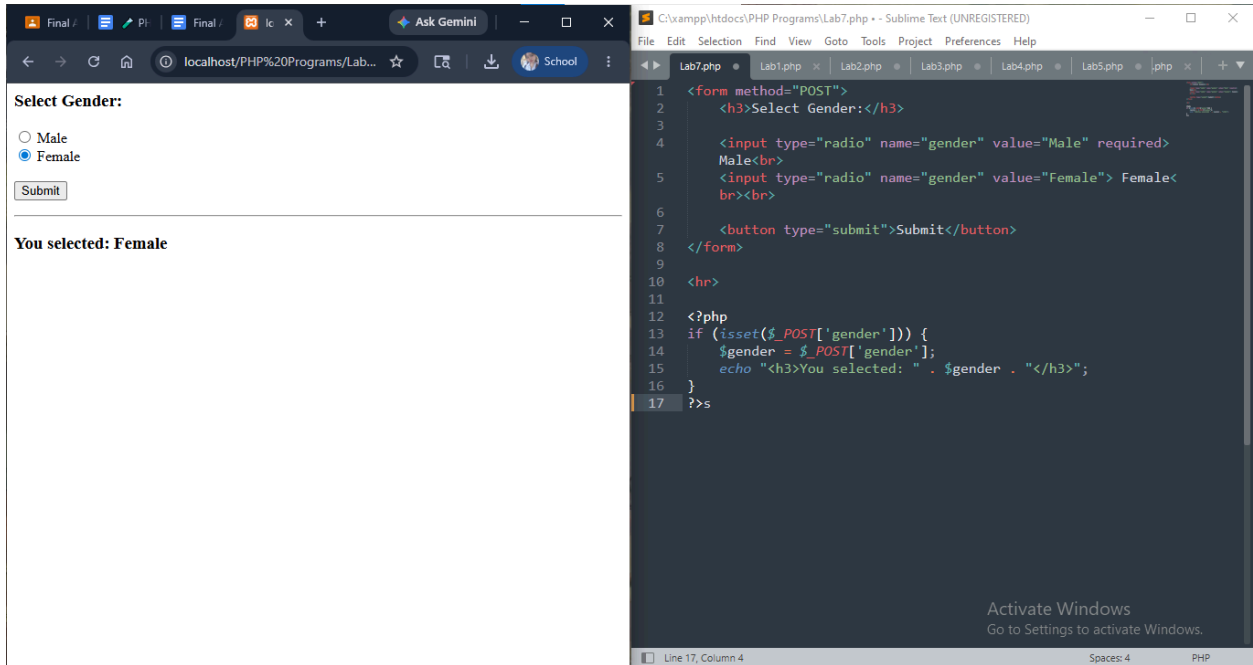

The browser window shows a web application running on localhost. It has a form with a label "Enter Email:" and a text input field containing "gloemail.com". Below the input field is a "Check" button. After clicking the button, the page displays "Invalid email".

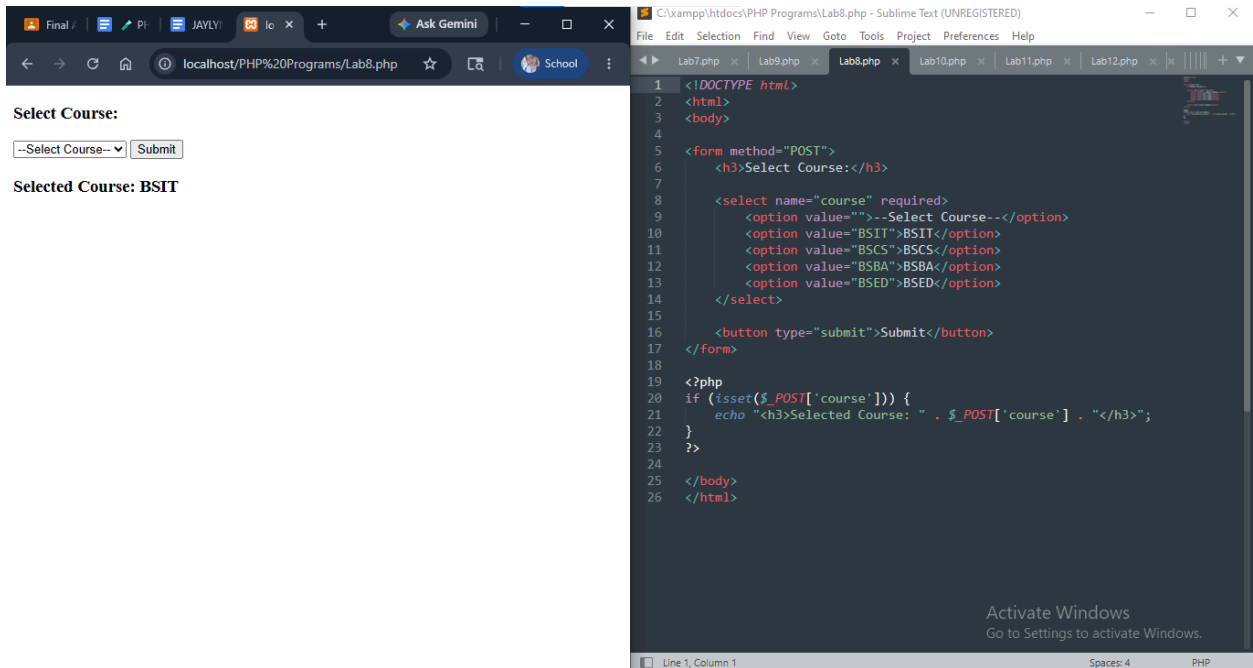

The Sublime Text editor shows the code for Lab6.php:

```
1 <form method="POST">
2     Enter Email:
3     <input type="text" name="email" required>
4     <button type="submit">Check</button>
5 </form>
6
7 <?php
8 $result = "";
9
10 if (isset($_POST['email'])) {
11     $email = $_POST['email'];
12
13     if (filter_var($email, FILTER_VALIDATE_EMAIL)) {
14         $result = "Valid email: " . htmlspecialchars($email);
15     } else {
16         $result = "Invalid email";
17     }
18
19     echo "<h3>$result</h3>";
20 }
21 ?>
```

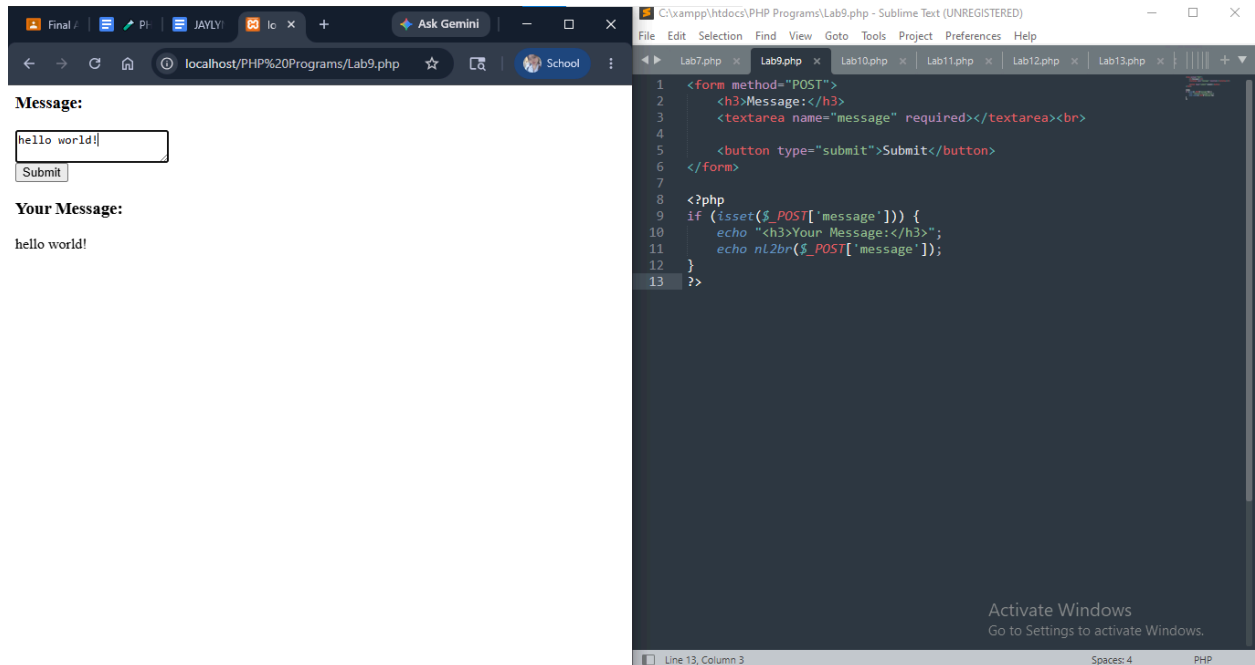

Lab 7: Radio Buttons

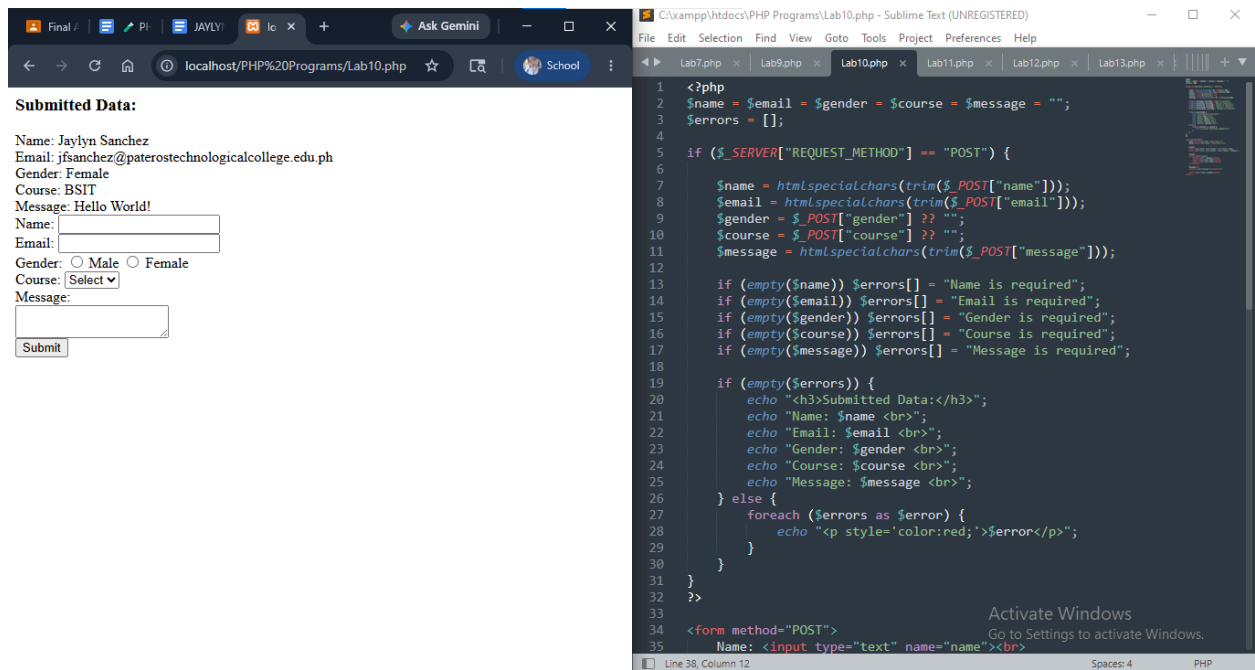

Lab 8: Dropdown Menu

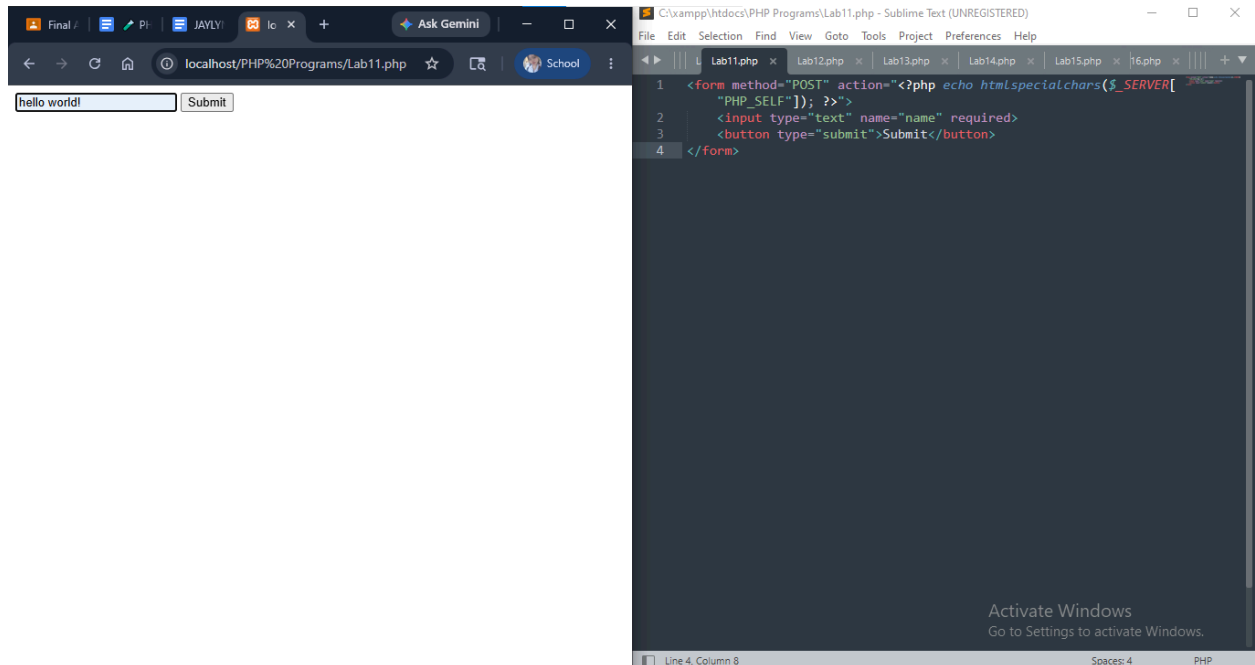

Lab 9: Textarea Input

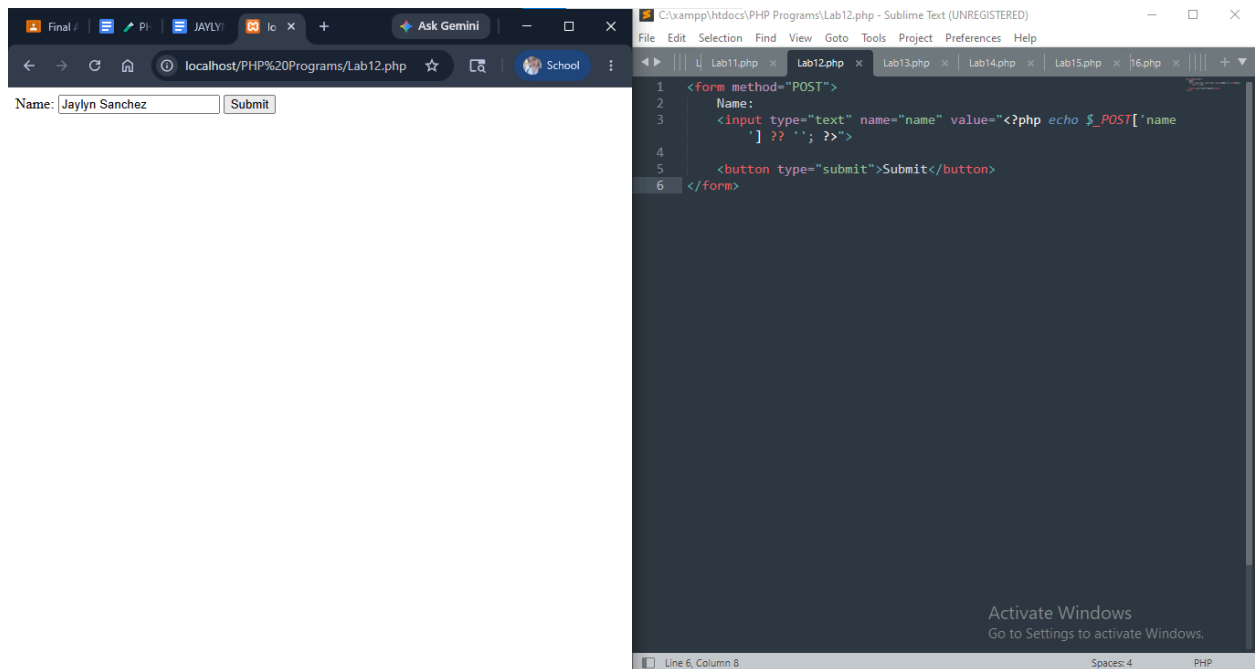

Lab 10: Combined Form

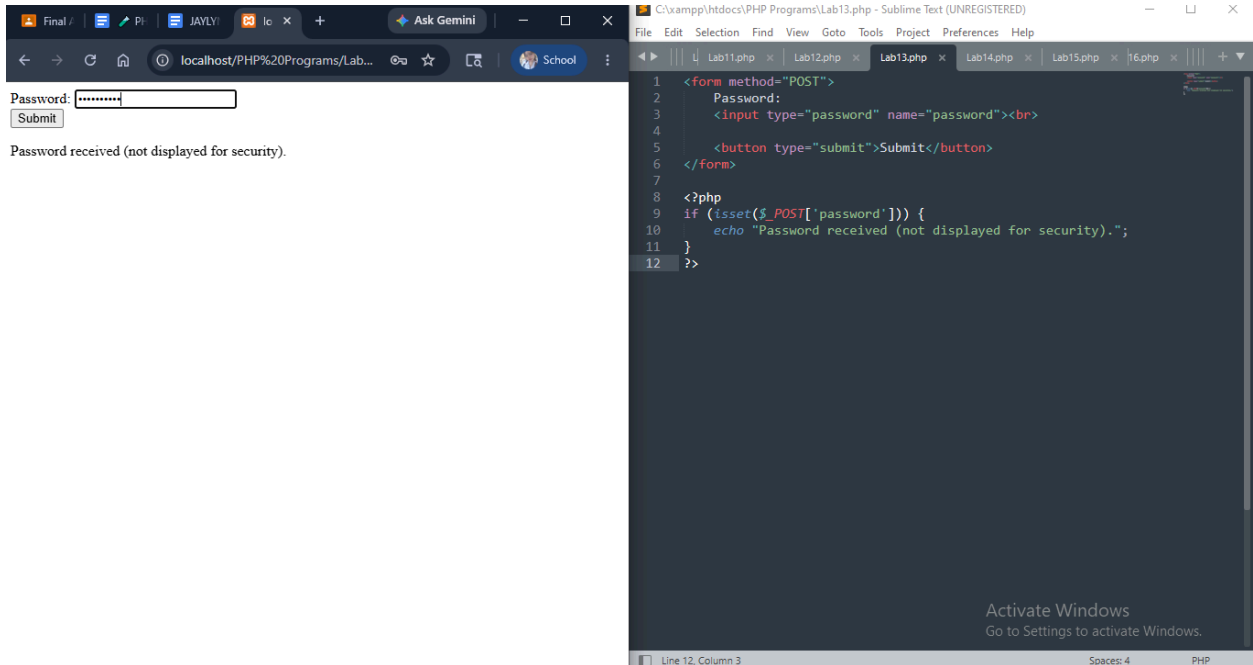

Lab 11: Self-Processing Form: It is safer because it submits the form to the same page while also protecting the website from harmful scripts.

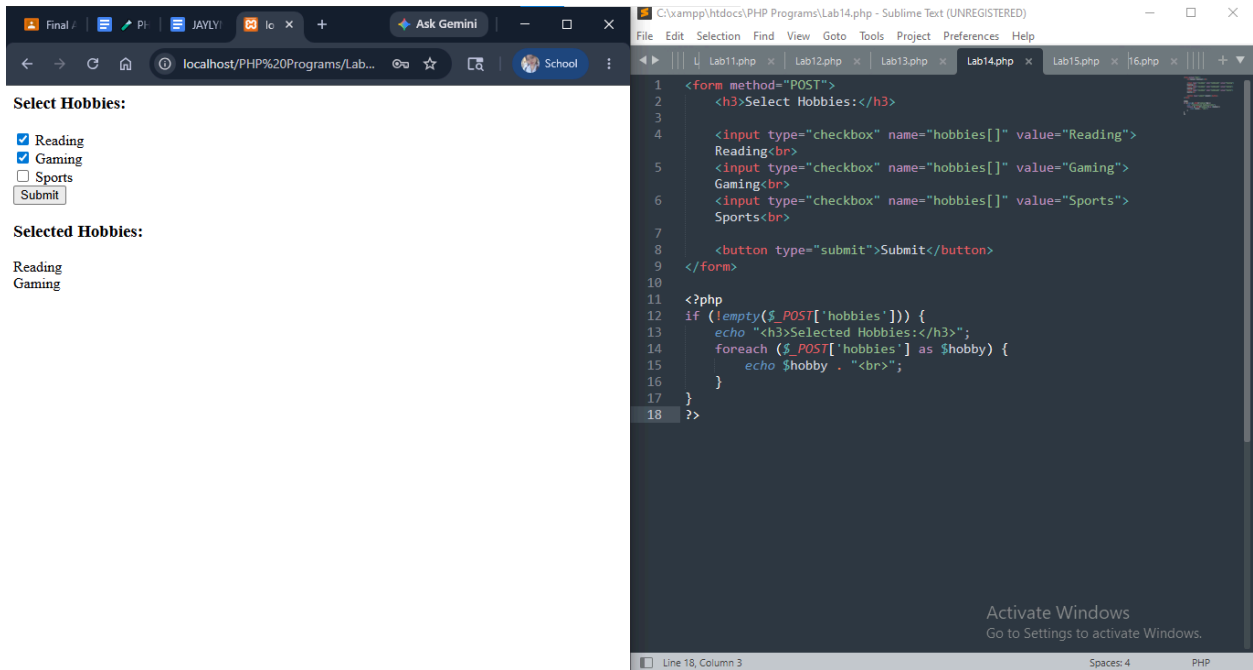

Lab 12: Sticky Form

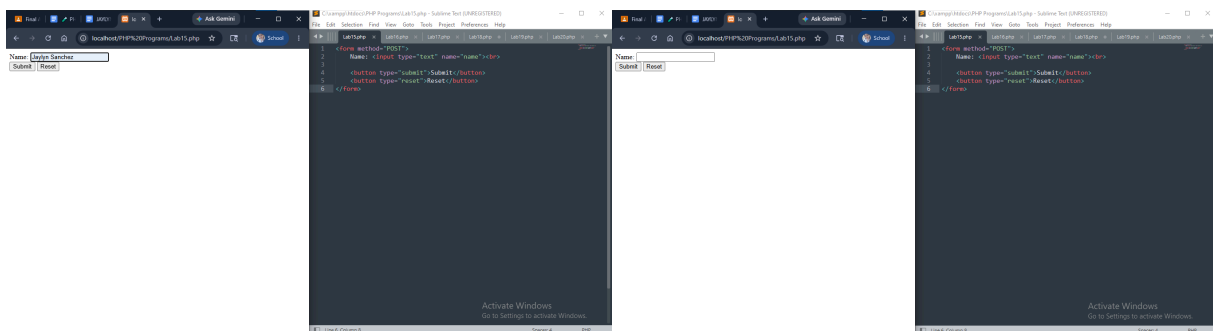

Lab 13: Password Input

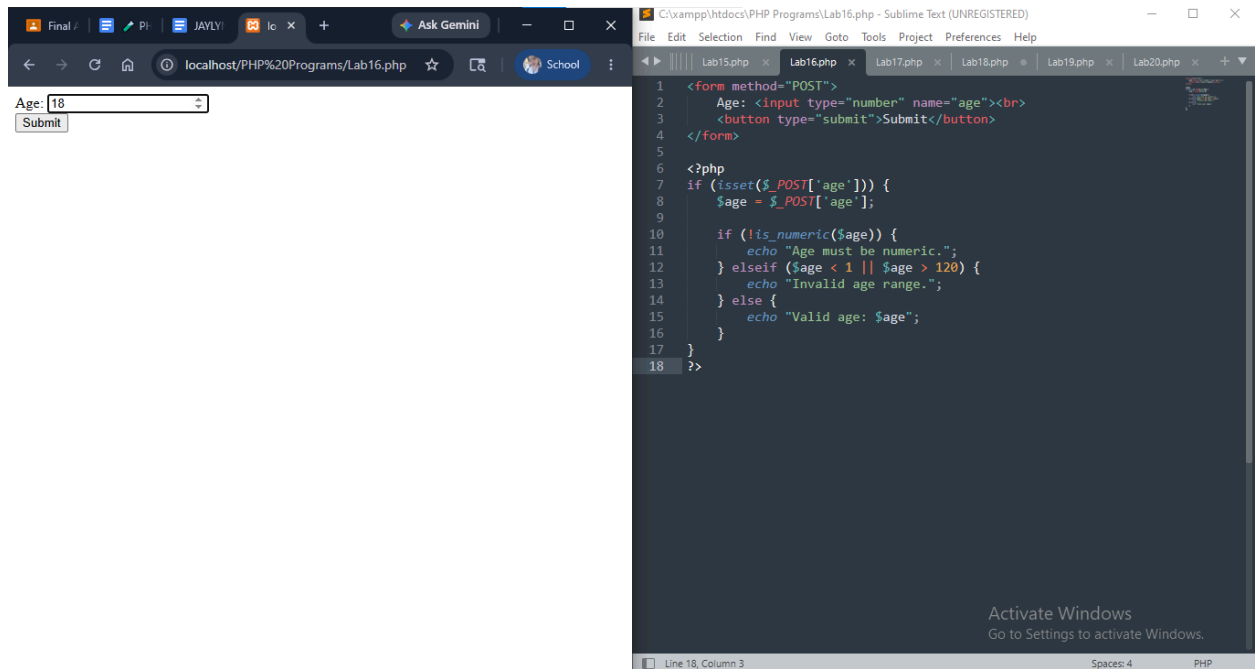

Lab 14: Checkbox Input

Lab 15: Form Reset Button

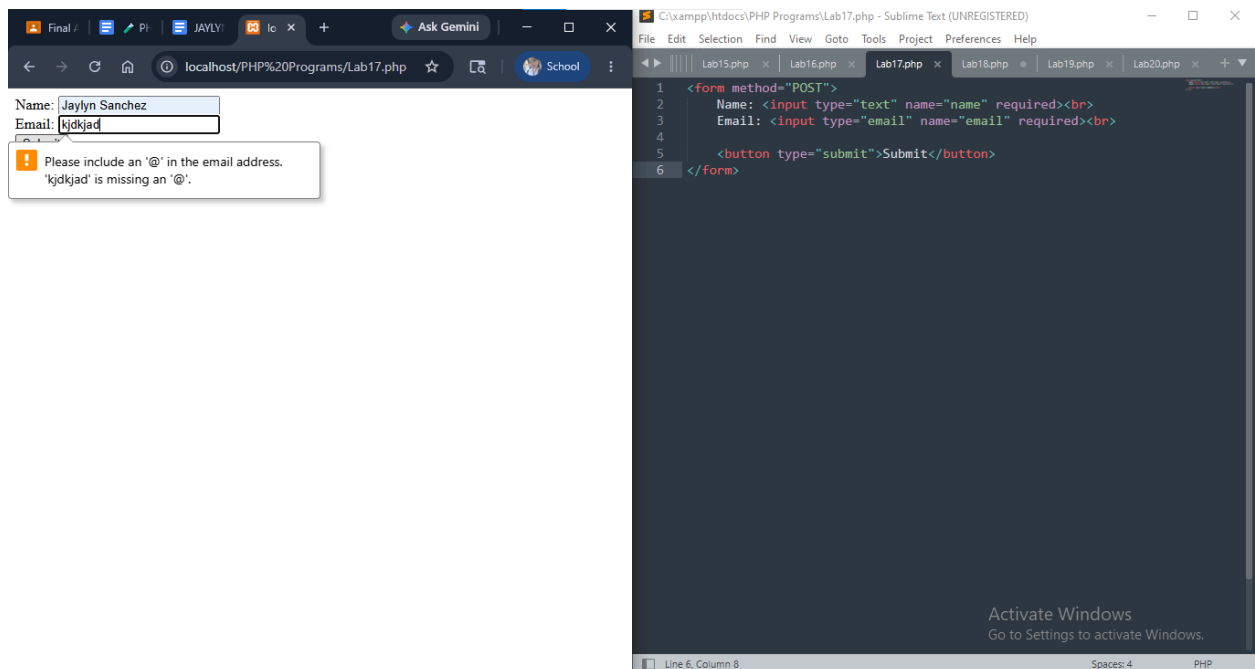

Lab 16: Number Input Validation

The browser window displays a form with the label "Age:" and a text input field containing the value "18". Below the input field is a "Submit" button. The Sublime Text editor shows the PHP code for Lab16.php, which implements a POST method form with an "Age" input field. The code includes validation logic to check if the input is numeric and within the range of 1 to 120.

```
1 <form method="POST">
2   Age: <input type="number" name="age"><br>
3   <button type="submit">Submit</button>
4 </form>
5
6 <?php
7 if (isset($_POST['age'])) {
8     $age = $_POST['age'];
9
10    if (!is_numeric($age)) {
11        echo "Age must be numeric.";
12    } elseif ($age < 1 || $age > 120) {
13        echo "Invalid age range.";
14    } else {
15        echo "Valid age: $age";
16    }
17 }
18 ?>
```

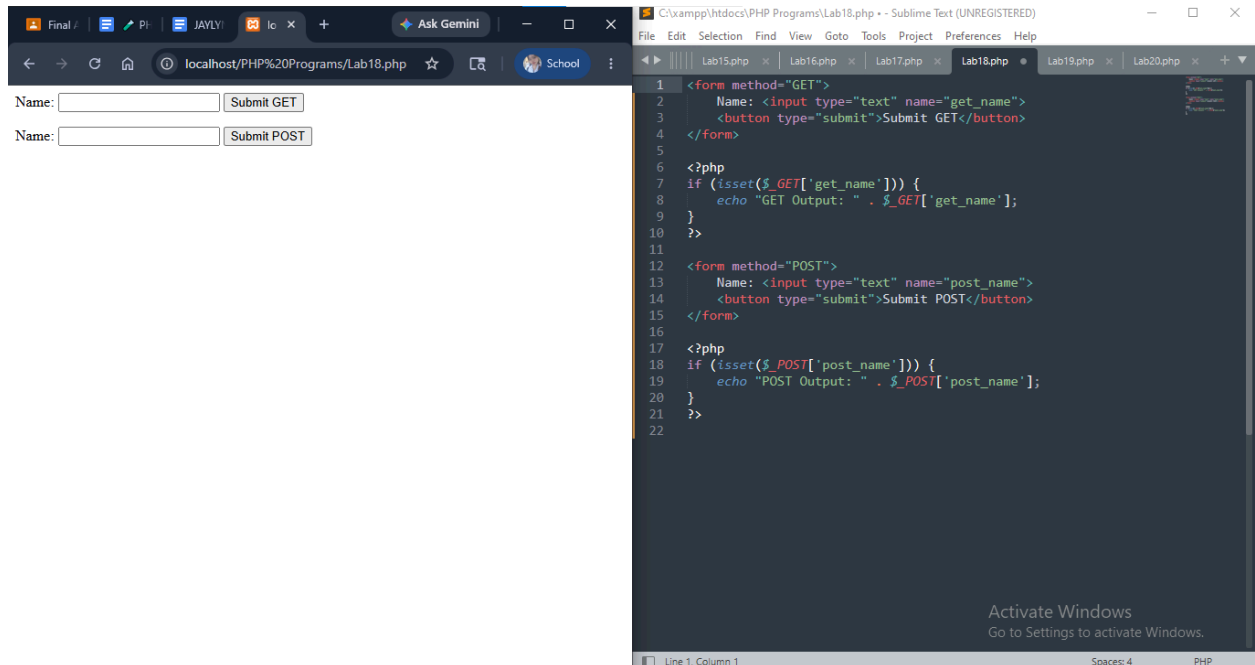

Lab 17: Required Attribute (HTML)

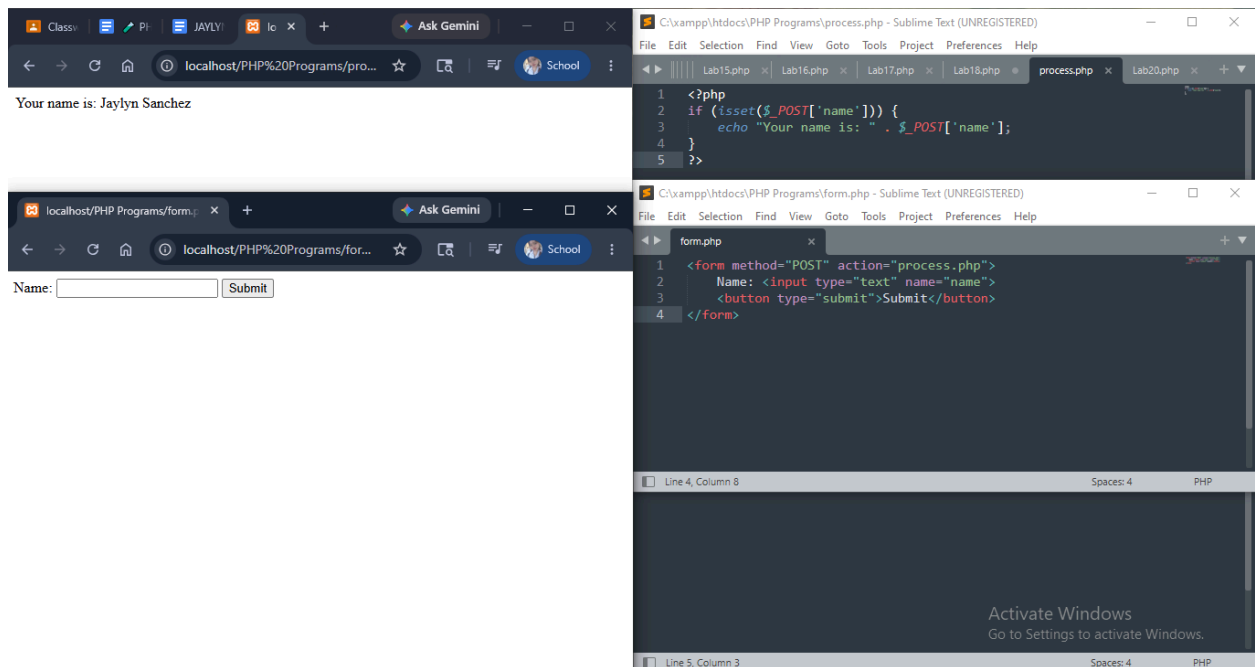

The browser window displays a form with the label "Name:" and a text input field containing the value "Jaylyn Sanchez". Below the input field is a "Submit" button. The Sublime Text editor shows the PHP code for Lab17.php, which implements a POST method form with "Name" and "Email" input fields. The code includes validation logic to check if the input is required and if the email address is valid.

```
1 <form method="POST">
2   Name: <input type="text" name="name" required><br>
3   Email: <input type="email" name="email" required><br>
4   <button type="submit">Submit</button>
5 </form>
```
